                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        bearing an antigen comprising at least 10 contiguous amino acids of mesothelin involves: (a) providing a chimeric molecule comprising the effector molecule attached to a targeting molecule that specifically binds to mesothelin; and (b) contacting the tumour with the chimeric molecule such that the chimeric molecule specifically binds to a tumour cell. Also claimed is a method for inhibiting mesothelin expression or activity by contacting mesothelin bearing cells with inhibitory nucleic acids for the mesothelin gene. The methods can be used to detect tumour cells and to inhibit the growth of cells bearing mesothelin. Mesothelin derived antigens
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          on mesothelium, mesotheliomas, ovarian cancers and some squamous cell carcinomas. The antiqen has been designated mesothelin. Its amino acid sequence was deduced from a cDNA clone (see AAT91079) isolated from a HeLa cDNA library. A 40 kDa form (KL) of mesothelin that is found on the surface of human ovarian tumour OVCAR-3 cells appears to be derived from the 69 kDa precursor by several processing steps. A claimed method for specifically delivering an effector molecule to a tumour cell specifically delivering an effector molecule to a tumour cell

Antibodies specific to MRA polypeptides are used for the detection of a malignant condition. Mesothelin is a differentiation antigen which is expressed in the surfaces of normal mesothelial cells and also on certain cancer cells, including epithelial ovarian tumours and mesotheliomas. The method is useful for detecting the presence of malignant condition, specifically, adenocarcinoma, mesothelioma, ovarian carcinoma, pancreatic carcinoma or non-small cell lung carcinoma.

Antibodies specific to mesothelin related antigen (MRA) polypeptides are used for the detection of a malignant condition. Mesothelin is a differentiation antigen which is expressed in the surfaces of normal mesothelial cells and also on certain cancer cells, including epithelial ovarian tumours and mesotheliomas. The method is useful for detecting the presence of a malignant condition, specifically, adenocarcinoma, mesothelian, ovarian carcinoma, pancreatic carcinoma

Antibodies specific to MRA polypeptides are used for the detection of a malignant condition. Mesothelin is a differentiation antigen which is expressed in the surfaces of normal mesothelial cells and also on certain cancer cells, including epithelial ovarian tumours and mesotheliomas. The method is useful for detecting the presence of a malignant condition, specifically, adenocarcinoma, mesothelioma, ovarian carcinoma, pancreatic carcinoma or non-small cell lung carcinoma.

                                                                                                                                                                                                                                                            disorders e.g. amnesia or age-related memory loss, and neurological disorders e.g. migraine. AZAD molecules are useful as markers of disorders or disease states, as markers for precursors of disease state, for predisposition of disease state or as markers of drug activity or pharmacogenomic profile of a subject. The AZAD polypeptide and polynucleotide are capable of modulating protein-protein interaction, e.g. by interacting with an extracellular component, thereby modulating cellular activities, including attachment, adhesion, migration, patterning, growth and/or differentiation of a cell. AZAD proteins regulate embryonic development and differentiation, tissue maintenance and function, pathological conditions, e.g. neuronal degeneration, neoplastic transformation and tumour progression. AZAD proteins are
                                                                                                                                                               useful as immunogens to raise anti-AzAD antibodies which are useful to detect and isolate AZAD proteins and modulate its activity. AZAD proteins are useful to screen for naturally occurring AZAD substrates and to screen for drugs or compounds which modulate AZAD activity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      and cancer (e.g. adenocarcinoma, prostate cancer, genitourinary system carcinomas and testicular tumour). The neurodegenerative disorders

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Matches
                                                                                                          The present invention relates to human JAFFA polyhuclevilves (New AAF90326) and polyheptides (see AAB82351). JAFFA is a novel membe of the fibroblast growth factor family. JAFFA proteins may be useful for developing novel diagnostic and therapeutic agents for JAFFA-associated disorders such as cancers and ABO(H) blood group disorders, and for controlling cellular proliferative and/or disorders, and for controlling cellular proliferative and/or
                        differentiative disorders. JÄFFA nucleic acids and proteins may be used to treat and/or diagnose a variety of immune disorders such as autoimmune disease and multiple sclerosis. JAFFA nucleic acids may also be used to express JAFFA protein, to detect JAFFA mRNA or a genetic alteration in a JAFFA gene, and to modulate JAFFA activity. Note: The present sequence is given in the Sequence Listing from
                                                                                                                                                                                                                                                                          Isolated JAFFA nucleic acid molecules which encode novel fibroblast growth factor family members (JAFFA) are useful for developing novel diagnostic and therapeutic agents for JAFFA-associated disorders such

Coryneform bacteria are useful for producing amino acids, nucleic acids, vitamins, saccharides and organic acids, particularly L-lysine. The present sequence is a protein described in the exemplification of the invention.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Query Match
                                                                                                                                                                                 This invention describes a novel human phospholipase A2 (PLA2) protein (I) and its encoding nucleic acid. The amino acid (I) releases arachidonic acid in specific tissues characterized by unique membrane phospholipids, by generating lysophospholipid species which are deleterious to membrane integrity or by remodeling of unsaturated species of membrane phospholipids through deacylation/reacylation mechanisms. The amino acid is useful in assays to identify inhibitors having a therapeutic benefit, such as inhibiting the central role of PLA2 in the inflammatory component of Alzheimer's disease. The amino acid (I) allows sensitive and rapid screening and identification of inhibitors of phospholipase A2. This sequence represents the human PLA2 protein (also known as phosphatide 2-acyl hydrolase).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   1557
